## Understanding Butalbital And Its Medical Uses

Butalbital is a prescription medication commonly used in combination with other ingredients to treat tension headaches and certain types of migraines. It belongs to a class of drugs known as barbiturates, which work by relaxing muscle contractions and calming the central nervous system.

Because of its potential for dependence and misuse, Butalbital is classified as a controlled substance in many regions, including the United States. This makes it essential to obtain it only through licensed healthcare providers.
